

Floor Plan

The Alternative School educates students who struggled and/or risked expulsion at one of the main high school campuses. Small class sizes allow students to learn with less distraction and more teacher support.

The compact plan consists of 12 classrooms wrapped around a central core containing a multi-purpose room, designed to allow close interaction with and supervision of students. The building includes a science room, computer lab and an industrial art room. Exteriors were designed to relate to nearby Morton Freshman Center.

Morton Alternative School Cicero, IL

Total Building Area
20,530 sf

Capacity
100 students

Construction Cost
\$5,630,000

Completed
Summer 2007
